## Design and development

The majority of Pokémon in Generation I had relatively simple designs and were highly analogous to real-life creatures including but not limited to: Pidgey (a pigeon), Krabby (a crab), Rattata (a rat), Ekans (a snake), Arbok (a cobra), Seel (a seal), and Dewgong (a dugong). Many Pokémon in the original games served as the base for repeating concepts later in the series.<sup>[1]</sup>

Aerodactyl	<i>Putera</i> (プテラ)	142	Rock	Flying	Beginning of evolution	<u>Mega Evolution</u>	It is a fossil Pokémon that must be revived from the Old Amber. It used to rule the skies back when it was alive; not even computers can even revive it to make it what it used to look like. It is based on pterodactyls and dragons/wyverns.
<u>Snorlax</u>	<i>Kabigon</i> (カビゴン)	143	Normal		<u>Munchlax</u> (#446)	<u>Gigantamax</u>	It is carefree about everything, and it will allow children to play on its vast belly while it sleeps all day. After eating around 500 pounds of food, it goes flat to sleep for a while. Its appearance is a large, obese bear like Pokémon with blueish-green body and a white circle-shaped belly, white feet and face. In the games, it blocks the way forward, and can only be awoken with the PokeFlute. In Generation IV it gained a pre-evolution, Munchlax. Its Gigantamax form has a forest growing on it.
Articuno	<i>Furīzā</i> (フリーザー)	144	Ice	Flying	No evolution		It is part of the Legendary Bird Trio. The naming conventions for this trio are based on their type – Arctic, Zap and Molt – along with 1, 2, 3 in Spanish – <i>uno</i> , <i>dos</i> , <i>tres</i> respectively. As it flies, snow drifts from its wings. Its Galarian form is a Psychic/Flying type.
Zapdos	<i>Sandā</i> (サンダー)	145	Electric	Flying	No evolution		It is part of the Legendary Bird Trio. Its design is inspired by the Indigenous North American myth of the thunderbird. <sup>[18]</sup> Its Galarian form is a Fighting/Flying type.
Moltres	<i>Faiyā</i> (ファイヤー)	146	Fire	Flying	No evolution		It is part of the Legendary Bird Trio. Its design is inspired by the firebird of Slavic folklore. <sup>[18]</sup> Its Galarian form is a Dark/Flying type.
Dratini	<i>Miniryū</i> (ミニリュウ)	147			Beginning of evolution	<u>Dragonair</u> (#148)	Its existence was unknown until a fisherman pulled it up after fishing for about ten hours. It appears as a blue serpentine creature. It has been

						seen to grow to several sizes in the anime.
Dragonair	<i>Hakuryū</i> (ハクリュー)	148			<u>Dratini (#147)</u>	<u>Dragonite (#149)</u> Dragonairs are longer in length (and bigger in size) than Dratinis, have wings for ears, and can fly using an unknown power.
Dragonite	<i>Kairyū</i> (カイリュー)	149		Flying	<u>Dragonair (#148)</u>	End of evolution It is a large orange dragon Pokémon that flies at high-speed. It zooms off over seas to challenge other Pokémon. It has been reputed to guide sailors in storms to the nearest land. Unlike Charizard, it actually is a dragon in both appearance and type.
<u>Mewtwo</u>	<i>Myūsū</i> (ミュウツー)	150		Psychic	Beginning of evolution	<u>Two Mega Evolutions</u> It is one of the playable characters in <i>Super Smash Bros. Melee</i> , <i>Super Smash Bros. for Nintendo 3DS / Wii U</i> and <i>Super Smash Bros. Ultimate</i> . Its genes were spliced and restructured from Mew's. Its treatment from humans made it resentful and aggressive, before learning the error of its ways. It also appears in several movies.
<u>Mew</u>	<i>Myū</i> (ミュウ)	151		Psychic	No evolution	It is only available through Nintendo events. It can turn invisible at will and turn into anything at will. It is considered one of the original pregenetor Pokémon, as all Pokémon descend from Mew. It clashes with Mewtwo during the Pokémon movies.
<u>MissingNo.</u>	<i>Ketsuban</i> (けつばん)	None <sup>[nb 8]</sup>	Bird <sup>[nb 9]</sup>	Normal	No evolution	An <u>error handler species</u> , "Missing Number" was created to handle attempts at accessing nonexistent Pokémon species. <sup>[59][60]</sup> It is regarded as one of the most famous and popular <u>glitches</u> in video game history. <sup>[61]</sup> This "Pokémon" has led to several urban legends and creepypastas. It has also made some glitches in the games.

## Notes

- 
1. Details on Pokémon names, National Pokédex numbers, types and evolutions are obtained from The Pokémon Company International's online Pokédex.<sup>[2]</sup>
  2. Prior to *X* and *Y*, Clefairy, Clefable, Jigglypuff, and Wigglytuff were pure Normal types while Mr. Mime was pure Psychic.
  3. Galarian Meowth (introduced in *Pokémon Sword and Shield*) are capable of evolving into Perrserker.
  4. Prior to *Gold* and *Silver*, Magnemite and Magnetron were considered as pure Electric types.
  5. Only Galarian Farfetch'd (introduced in *Pokémon Sword and Shield*) are capable of evolving into Sirfetch'd.
  6. Only Galarian Mr. Mime (introduced in *Pokémon Sword and Shield*) are capable of evolving into Mr. Rime.
  7. Eevee is capable of evolving into Vaporeon (#134), Jolteon (#135), Flareon (#136), Espeon (#196), Umbreon (#197), Leafeon (#470), Glaceon (#471) or Sylveon (#700).
  8. MissingNo. is programmed with the Kanto Pokédex number "000", however it doesn't exist in the National Pokédex.
  9. Bird type was a scrapped type for Generations I and II; however, code for it remains in the games. MissingNo. is a bird type in *Red*, *Blue* and *Green* versions, however it is replaced by a randomly generated glitch type in *Yellow*.
